

Fruit Strip Gum Quilt Part 3

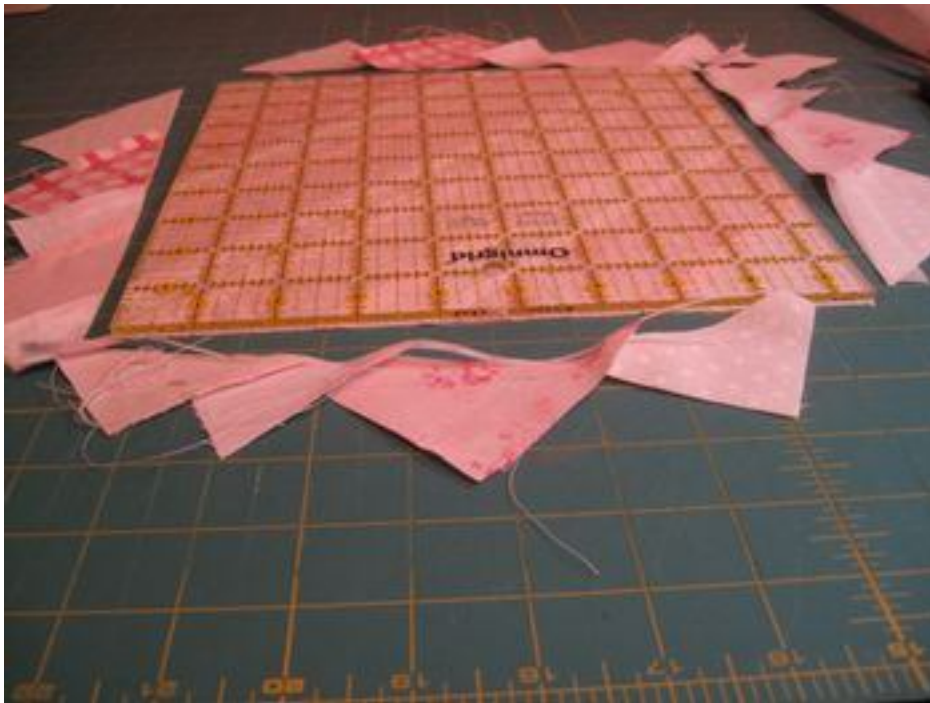

This is what your completed block should look like prior to trimming. Try not to be anxious about the excess fabric, remember this is a scrap project, and the goal is to use up our fabric!

This is the block from the back, trim the block from the back, to loosely align with the NFNW interfacing, in order to steer clear of those pesky bias edges.

Line up your 9.5" ruler on the diagonal, with the longest white strip in the center

Trim away the excess

Ta Da...a finished block! 29 more to go!

Trim those blocks, next week, making the top!

Remember, keep the white strips in the center of the blocks...this will give unity to your scrap quilt.

Can't wait for everyone to start adding your blocks to our [Flickr group](#)!
